

DATA GUARD
SOLUTIONS™

Green Optimized, not Green Compromised

Ultra-efficient Servers

- Increase your throughput and decrease your operating costs
- Right-sized provisioning
- 8x speed, less than 1/2 power
- Start saving money today!

Ultra efficient, Green-Optimized Servers

We have engineered low power SERVERS which use 75% less energy and 50% less space than conventional servers. Many DATA CENTERS today are already at maximum HVAC or power capacity and will have to relocate or upgrade, incurring astronomical cost. Lopoco servers are a perfect solution to alleviate that pain.

**Leaves all other servers
in the dust!**

DATA GUARD
SOLUTIONS™

12-Core Servers

This workhorse 1U server is powered by a twelve logical core ultra efficient CPU and comes configurable up to 512GB DDR3 ECC memory, 10 hot swap disk bays. While maximum possible power consumption for this deeply capable server is 1151 watts, most customers will never see it consume more than 95 watts regardless of the load.

- Dual gigabit Ethernet controllers plus a separate IPMI LAN port round out one of the most powerful servers we sell.
- *LP-6240-10H Ultra-Efficient Server*
- *LP-6240-8H Ultra-Efficient Server*
- *LP-6240-6H Ultra-Efficient Server*

8-Core Servers

LP-4255-10H Ultra-Efficient Server

The LP-4255-10H is an excellent choice for applications that have concentrated bursts of CPU load combined with very high storage needs, including video or audio streaming with high connection levels.

- Power consumption: 32 watts idle, 106 watts max (TDP)¹
- Eight logical core ultra-efficient CPUs
- Up to 32GB DDR3 ECC memory
- 10 hot swap disk bays

LP-4255-8H Ultra-Efficient Server

LP-4255-6H Ultra-Efficient Server

LP-4255-2H Ultra-Efficient Server

- While maximum possible power consumption for this deeply capable server is 98 watts, most customers will never see it consume more than 85 watts at the highest load levels.
- Dual gigabit Ethernet controllers plus a separate IPMI LAN port round out one of the best servers we sell.

DATA GUARD
SOLUTIONS™

4-Core Servers

LP-2230-10H Ultra-Efficient Server

The LP-2230-10H is a surprisingly capable performer given its modest quad logical core processor. Able to easily handle database, email or file sharing duties for small businesses, it also makes a perfect departmental server for web-based applications like CRM, wiki, calendar, file sharing, web caching and accounting. With its ultra-efficient server design, it can be located in an office environment, making less noise and heat than your average desktop.

- This 10 hot swap disk model is a great choice for applications which require very large amounts of storage – video, audio or photographic sharing – large database applications or backup server applications with a long service life.
- Base processor clock speed is 2.3 GHz, with turbo up to 3.5 GHz for quick completion of individual tasks
- Configured with 2TB drives, this server can handle up to 20TB of raw storage, or 16TB of Raid-6 storage for extremely storage-intensive applications, all while consuming less than 45 watts on average and running quiet enough to sit on a desktop in a cubicle environment.

LP-2230-8H Ultra-Efficient Server

LP-2230-6H Ultra-Efficient Server

LP-2230-2H Ultra-Efficient Server

Leaves all other servers in the dust!
