

Server Extended Warranty Certificate

Warranty type: 2-year add-on warranty
Warranty period: Aug/22/2015 - Aug/22/2017
Certificate ID: e7f8e740be46f4b627759e617d5323eef697bdee
Model: LP-4255-6H
S/N: 1400057
Configuration: 32GB (4 x 8GB) DDR3 ECC UDIMMs, 6 x Disks

Warranty

This certificate is for a 2-year extended warranty for the specified server. It provides for 2 additional years of limited warranty coverage. Warranty period is specified above. This limited warranty protects against hardware failures only, and does not pertain to software or useability of the product. It also covers power consumption of the server: the server will not consume more than the TDP ($\pm 5\%$), as specified on the system sheet, at any time, while consuming the idle power amount $\pm 5\%$ when no processing load is present. Actual power consumption is based on application and load level. For a full explanation of TDP and idle power consumption, including the variables and variances and how that pertains to this warranty, please consult our web site at www.lopoco.com. Warranted power consumption levels do not include the use of USB devices, as they may consume an unknown amount of power. Please keep the use of USB devices to a minimum. Generic USB sticks, keyboard and mouse adaptors, and USB bluetooth adapters intended for mobile applications are most likely safe to use. Many USB external disk drives, ethernet or wifi devices may consume large amounts of power, causing system instability.

Due to the fact that modification of the system may alter its power consumption in unpredictable ways, this warranty is voided upon opening of the server case by the customer. Additionally, this warranty is voided if any disk drive not qualified by lopoco.com is used. Substitution of disk drives or other storage devices not shipped with the system may alter the idle and TDP power consumption figures as specified on the system sheet, however, if the drives are on the lopoco.com qualified drive list, then the system is warranted to operate properly. Generic consumer grade SSDs intended for the mobile market are almost always OK to use. If you are unsure about the qualification of a specific disk drive, email us at the address below.
