

## Lopoco System Sheet

Model: LP-8180-10H  
S/N: 11600003  
Configuration: 32GB (2 x 16GB) DDR4 ECC RDIMMs, 2 SSDs, 0 HDD

### Power Consumption

Idle: 33.20 watts  
TDP: 89.60 watts

### Networking

LAN MAC addresses: 0c:c4:7a:d8:f3:0c 0c:c4:7a:d8:f3:0d  
IPMI MAC address: 0c:c4:7a:dc:d0:6a

### Warranty

This system comes with a limited warranty for 1 year against failure, and to consume no more than the TDP at any time, while consuming the idle power amount  $\pm 5\%$  when no load is present. Actual power consumption is based on application and load level. For a full explanation of TDP and idle power consumption, including the variables and variances and how that pertains to this warranty, please consult our web site at [www.lopoco.com](http://www.lopoco.com). Warranted power consumption levels do not include the use of USB devices, as they may consume an unknown amount of power. Please keep the use of USB devices to a minimum. Generic USB sticks, keyboard and mouse adaptors, and USB bluetooth adapters intended for mobile applications are all OK. Many USB external disk drives, ethernet networking devices, and wifi devices can consume large amounts of power, causing system instability.

This warranty is voided upon opening of the server case by the customer. Additionally, this warranty is voided if any disk drive not qualified by lopoco.com is used. Generic consumer grade SSDs intended for the mobile market are almost always OK to use. If you are unsure about the qualification of a specific disk drive, email us at the address below.
