To Whom It May Concern:

I am very interested in your open position as a Software Engineer.

After reviewing the requirements of this position, I am confident to be an excellent candidate for ONStor because of my academic and employment background.

During my employment in multiple research organizations I held four different positions working on projects related to parallel file systems, grid computing and virtual environments, where I participated in teams of professionals discovering new solutions for emerging problems and implementing cutting-edge technological developments. In these positions I demonstrated my ability to learn new technologies very quickly. I believe that especially my experience of developing a parallel file system in C and MPI helps me fit that position well.

Since I published several papers and held talks on international conferences I am comfortable with theoretical and technical discussions. In a new work environment I adjust well and communicate clearly.

This year I graduated with honors and obtained an M.S. in Computer Science. In particular, I gained experience in the fields of object-oriented software engineering in Linux and Windows, theoretical computer science and programming parallel systems.

The enclosed resume describes my skills and experience in further detail. Please contact me with any question you may have.

Thank you for your consideration, I look forward to hearing from you.

Sincerely,

Jan Philipp Seidel
