

For the rest of these limited option set up pages, it is best to accept or "Continue" to move to the next page.

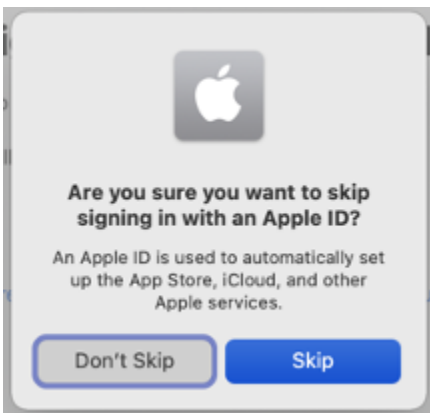

If you see the option for Migration Assistant, select Not Now in the lower-left corner.

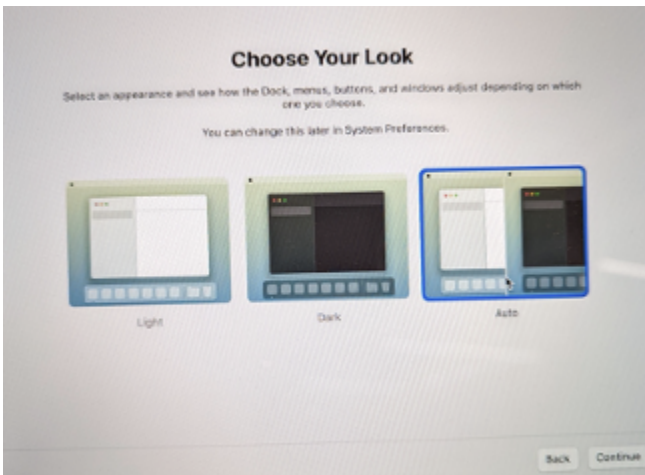

You can choose to sign in to iCloud on this Mac, but any data on this computer is owned by Perforce. Do not store personal data on this computer. You can choose to set this up later.

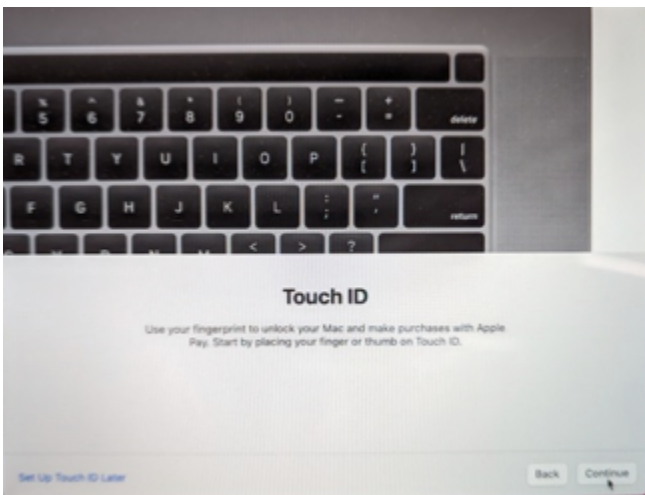

If you choose to Set Up Later, you will see another box open and verify you want to Skip the iCloud setup. Click Skip.

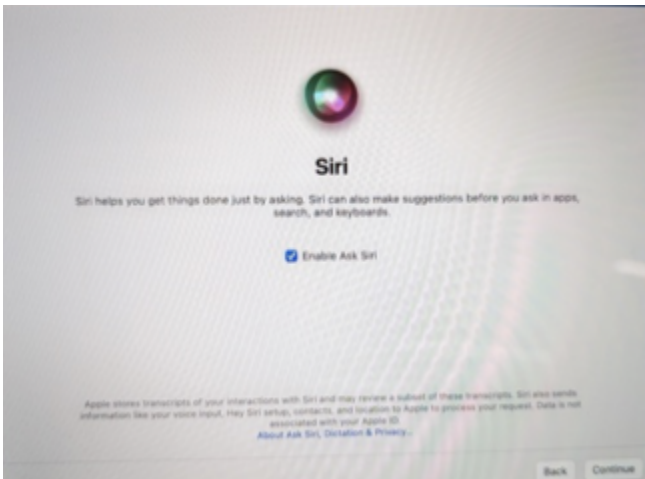

Feel free to choose your preference of Themes.

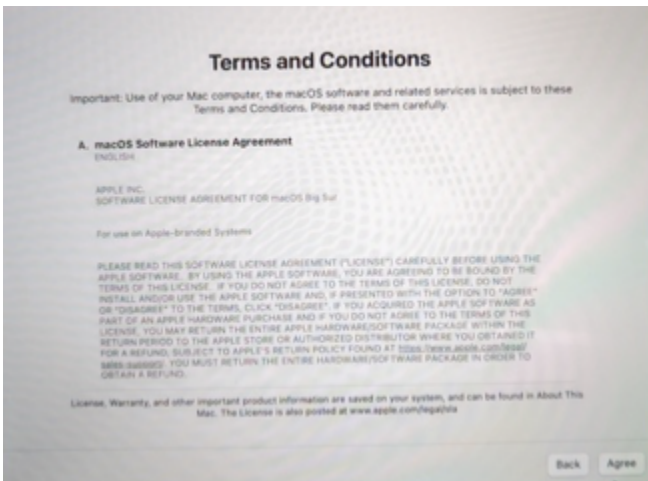

Feel free to set up Touch ID to utilize your fingerprint as a password.

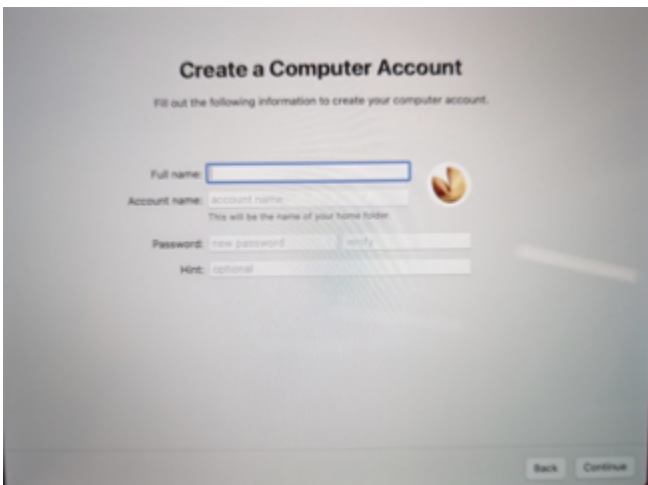

You can choose to set up Siri.

Follow all remaining default prompts.

Next create your user account.

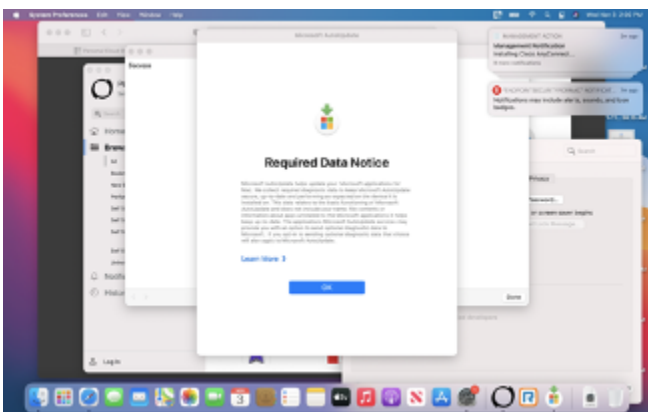

Enter your Full name, Account name, a password and verify your password. The hint is optional.

The Perforce standard for usernames is first initial and last name.

*Apple will try to fill this in for you automatically as your full first name and full last name, you can delete all but your first name's initial to comply with Perforce's company policy. IE: AmeliaReinarts becomes areinarts*

When you get logged in, you will see many apps open automatically. You can select all the default options. Some examples include:

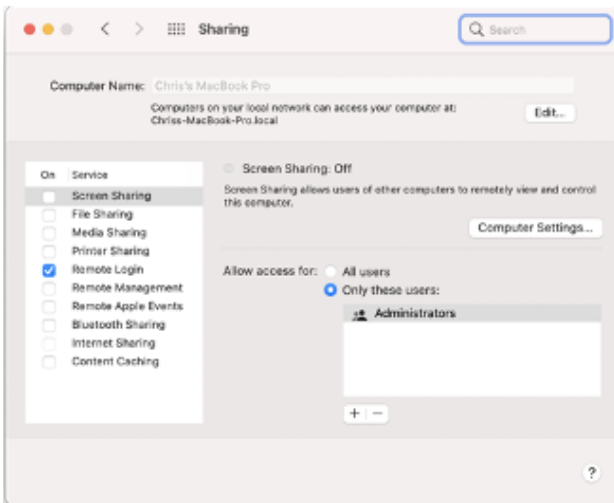

- Microsoft Office Required Data Notice
- BitDefender
- Perforce's "Self Service"

Next please go into your System Preferences and click on the Sharing icon (Currently in Big Sur it is a blue folder on the bottom row).

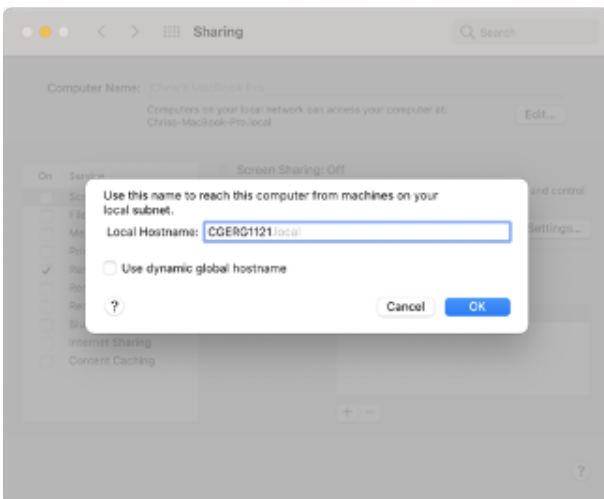

In the sharing app, we will update your computer's network name. To do this click on the "Edit..." button on the upper right side.

On the pop-up box, please enter your username first initial and last name (unless otherwise stated) and the month and year in MMY format.

EX: FLAST0322

Click OK.

You can now continue to allow the remaining apps to install.
